NOT YOUR AVERAGE SOFTWARE ENGINEER

User-focused software developer currently seeking a new challenge, with hands-on experience across web development, integrations, automation, cloud systems, CRM-style platforms, documentation, testing and product support.

I enjoy building practical solutions that connect systems, improve processes, and make work easier for the people who use them. My background across software engineering, operations, customer experience and QA means I can work between technical and business stakeholders, clarify requirements, document systems clearly, and deliver reliable improvements across different platforms.

TECHNICAL SKILLS

Software Development: TypeScript, JavaScript, Node.js, React, Python, C#, SQL

Integrations & Automation: APIs, workflow automation, event-driven workflows, data movement, system mapping, business process automation, application-layer engineering

Cloud & Platforms: Google Cloud Platform, PostgreSQL, Power Platform, Power Apps, Power Pages, Dataverse, Microsoft Fabric

CRM / Platform Experience: Salesforce Certified, Dataverse, Power Platform, customer data workflows, CRM-style business processes

Testing & Delivery: UAT, manual testing, regression testing, test cases, bug documentation, release support, acceptance criteria review

Tools: Jira, Confluence, GitHub, Git, Postman, Docker, Jest, VS Code

Ways of Working: Agile workflows, stakeholder communication, technical documentation, requirements clarification, product support, and cross-functional collaboration

PROFESSIONAL EXPERIENCE

Ava Tech — New Zealand (remote)

Technology consultancy delivering integration, automation, and digital workflow solutions for business clients.

Integration Engineer (Contractor)

Dec 2024 – Present

- Worked across Power Platform, Power Pages, Dataverse, Microsoft Fabric and client integration projects.
- Supported application workflows involving forms, data movement, business rules and user-facing processes.
- Created implementation notes, As-Built documentation, test cases and quality checks for client-facing systems.
- Clarified requirements, edge cases and expected behaviour with technical and business stakeholders.
- Translated ambiguous business needs into practical documentation, tickets and testable workflows.
- Supported QA, UAT and product testing across workflows, forms, data movement and system behaviour.
- Used AI tools to support documentation, workflow analysis and test planning, while manually reviewing output for accuracy.

PROFESSIONAL EXPERIENCE

Ruralco — Ashburton, Canterbury, (in-person)

Cloud-based statement processing and migration work supporting business-critical rural services.

Cloud Full Stack Developer

Oct 2025 – April 2026

- Built and supported cloud-based services using TypeScript, Node.js, PostgreSQL, Google Cloud Platform and Jest.
- Worked on a monthly statement pipeline producing IRD-approved outputs for Xero and MYOB.
- Supported SFTP-based data movement, scheduled processing and business-critical file outputs.
- Contributed to integrations, automation, testing, CI/CD, release support and technical documentation.
- Supported DEV/UAT testing for a major LBMX migration, validating backend workflows before release.
- Helped migrate away from a legacy system, contributing to an estimated saving of NZD \$12k per month.
- Collaborated with developers and stakeholders to investigate issues and support production readiness.

Streamliners — Christchurch, CBD (in-person)

Health technology company behind HealthPathways, building digital tools that support healthcare guidance

Engineering Intern

April 2025 – August 2025

- Completed a 400-hour capstone project focused on internal developer tooling.
- Built a dev tool using TypeScript, React, and C#/ASP.NET to help manage user permissions.
- Designed and implemented a Python-based solution to migrate bulk user permissions.
- Worked in an Agile team through sprint ceremonies, code reviews, and iterative delivery.
- Used Git, Jira, Confluence, and Docker as part of the development workflow.
- Worked with user stories, requirements, testing, and documentation.

Realtor.co.nz — New Zealand (remote)

Property technology startup developing and testing MVP product features for real estate users

QA / UAT Specialist Contractor

August – December 2025

- Tested MVP features across login, roles, navigation, user journeys and regression scenarios.
- Documented issues clearly and supported release readiness through structured UAT feedback.
- Checked feature behaviour against expected user flows and business requirements.
- Used manual testing and exploratory testing to identify defects, inconsistencies and usability concerns.
- Worked with a small product team where clear communication and concise documentation were essential.

Realtor.co.nz — New Zealand (remote)

Property technology startup developing and testing MVP product features for real estate users.

QA / UAT Specialist

Aug 2025 – Dec 2025

- Tested MVP features across login, roles, navigation, user journeys and regression scenarios.
- Documented issues clearly and supported release readiness through structured UAT feedback.
- Checked feature behaviour against expected user flows and business requirements.
- Used manual and exploratory testing to identify defects, inconsistencies and usability concerns.
- Worked with a small product team where clear communication, structured feedback and concise documentation were essential.

PROFESSIONAL EXPERIENCE

Spark New Zealand — New Zealand (hybrid)

Telecommunications and digital services company supporting customers across mobile, broadband and online channels

Digital Experience & Social Media Specialist

January 2014 – August 2019

- Supported customers through digital and social media channels, requiring clear communication, judgement and attention to detail.
- Managed customer issues in a fast-moving operational environment where tone, accuracy and follow-through mattered.
- Built strong experience understanding customer journeys, pain points and support impacts.
- Developed communication habits that now support clear QA documentation, bug reporting and stakeholder updates.

(more work history is available upon request)

EDUCATION

Bachelor of Software Engineering – B+ Grade Average

Whitecliffe — Technology & Innovation – 2022 – 2025

- Completed software engineering study with practical experience across full-stack development, cloud, databases, testing, documentation and Agile delivery.
- Received a scholarship for course fees in the first and second years.

(transcript is available upon request)

COMMUNITY INVOLVEMENT

Python New Zealand Board (hybrid)

National community organisation supporting Python developers, events and education across Aotearoa

Secretary

2025 – Present

- Support community communications, events (Meetups) and governance administration.
- Involved in the local and national Python community, including Kiwi PyCon planning and technology community engagement.

Lean Canvas — Christchurch, NZ (in-person)

Community-run co-working space supporting startups, developers, and creatives.

Community & Events Coordinator

March 2024 – March 2025

- Organised and hosted community events that brought together startups, developers and creatives.
- Founded and facilitated “Roast & Toast,” a regular event supporting idea validation and practical feedback.
- Supported event organisers with operational, administrative and coordination tasks.
- Facilitated community engagement across diverse groups, strengthening communication and stakeholder collaboration.
